

Experience, Expertise, Efficiency

MAP25 tray sealer

Welcome to APACK

"your packaging partner"

Apack makes the difference:
Many packaging solutions per year – confirms our in-depth experience and expertise in packaging business.

Our reliable machines have one particularly outstanding feature. We supply individual solutions via according your requested shelf life.

Customized to your market requirements. Ensuring you receive a cost effective, efficient solution that operates profitably. Backed up by the support of our dedicated team and after sale support.

We have built our reputation as the best service company in the industry based on our: demo, market test, service, training, emergency support, professional expertise and experience and of course the quality/reliability of our machines range.

Apack offers more than just packaging.

We emphasize:

- Innovation
- Quality
- Quick delivery
- Many options
- Mono-materials
- User-friendly packaging solutions
- Respect for the environment
- Optimum product presentation
- Extend shelf life

As your packaging partner, we look forward to working together in a mutually beneficial collaboration.

Special features and dual functions

Give your products special features that appeal to the end-user: a customized pack from APACK with an additional function can help differentiate your product from your competitors.

Particularly effective are packs that have a dual function for storage and presentation as a portion or bulk, or for storage or extend self life.

Our wide range of pack designs includes heat treatment of packs, as well as transport and storage packs.

MAP25 standart
E extension (l,w)
DS double-station

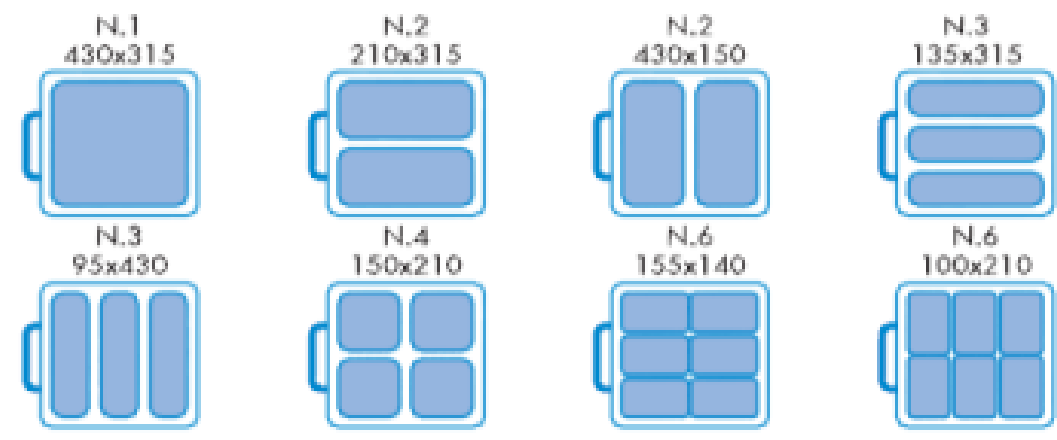

Technical data:

Capacity:..... 2-6 cycle/minute
 Overall dimension: 65x109x172(h) cm
 Weight incl. pump: 200 kg
 Film width max.: 470 mm
 Outer dimension: 280 mm
 Diameter of film roll: 76 mm
 Including:..... photocell

Extra:..... liquid or air filter
 tray lifting

Energy:..... 3/N/PE 400V AC 50 hz
 Power consumption: max 6.0 kw
 Vacuum pump: 60 m3/h
 Air consumption: 7 NL per cycle, 6 bar
 Gas pressure: 2-6 bar

Standart tool for various tray size mm

Easy Friendly use:

Multi-functional touch screen panel with PLC, show all error message, and program data, incl. counter, 99 program and 24 vdc control is our standart delivery.

ZERO2 program can help to reach max vacuum level and minimum oxygen in the pack. Also possible to pack hot and liquid product via multi-stage vacuum program.

Special tool 3.3 diameter 115 mm for 200gr dried fig

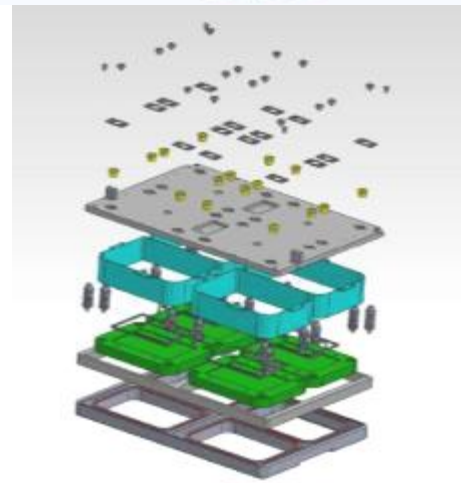

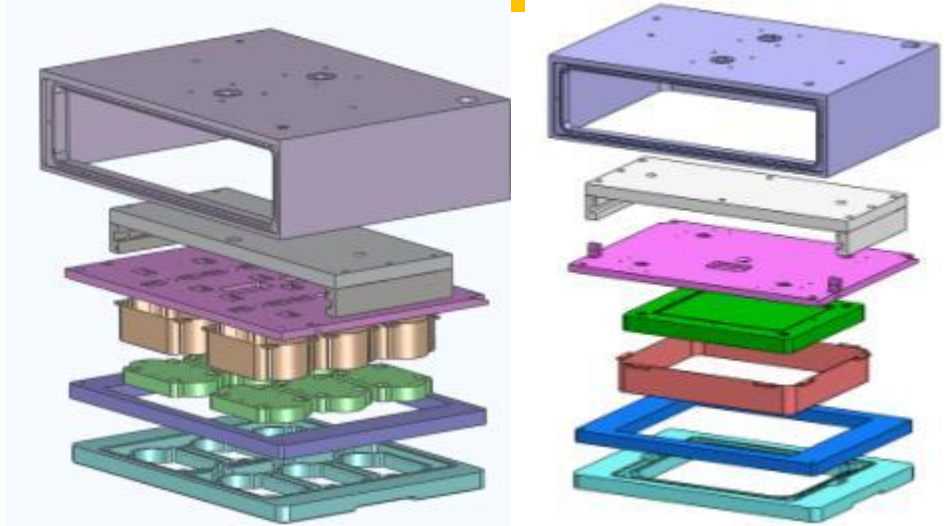

Easy Friendly use:

Touch screen PLC which can control all machine function

Compact tool design according product/tray

Design

The secret to beauty. Our experts reveal it. Rectangular, multi-sided, round or shaped packs – practically any shape is possible. Our experts work with you to design the best pack for you, and then recommend the most cost effective packaging machine to produce that pack.

The result is an attractive pack that combines functionality, efficient use of packaging material delivered in the most cost effective way.

As fresh as can be...

Thanks to packaging from APACK

About MAP

Your product is supposed to be presented as attractively and well-protected as possible. APACK supplies a wide range of solutions for practically various requirements. Depending on the product, you have the choice of many different types of pack as far as the atmosphere is concerned.

Longer shelf life thanks to MAP packaging. Harmless inert gases – naturally present in the air that surrounds us – are fed into the pack after the evacuation operation and guarantee that the product has an extended shelf life and stays fresh longer. MAP packs from APACK make sure no pressure is exerted on the product, so that it can be presented particularly attractively. Soft, porous and cut products rest loosely in the pack and maintain their colour too. Exactly the way they should !

Food is a key indicator of changing lifestyles and the current trends driving innovation in developed economies are convenience and health consciousness, resulting in significant changes on supermarket shelves.

APACK is a full-range provider to the food industry and offers already today innovative products which meet these requirements. Our portfolio ranges from printed films and laminates to converted flexible lid packaging solutions

The packaging solutions for the food market range from high-quality extruded films, barrier materials and printed laminates to converted packaging such as pouches, plastic bags, retort microwaveable packaging and re-closable bags. These are always offered with a variety of features with regards to barrier properties, sustainability and professional printing, end-user functionalities like handles, easy opening and reclosing. One example of the wide product range for the retort & chilled food industry is our high barrier and peel packaging solution

Specialty Lidding Films

Available in clear, white, metalized and also available in retortable form, these films can be sealed to CPET, PET, PP, PS, PVC or Paperboard substrates. Seal strength can vary from easy peel to weld seal with a combination adhesive type, strength and temperature.

Some of stock film structure:

- APCLID82P1A0B2 with ALOX and Peel , retort application
- APCLID88P0A0B1 medium barrier for heat treatment
- APCLID85P1A0B0 to seal all kind of tay
- APCLID30P0A0B1 for ALU, CPET and DOT trays
- APCLID35P0A1B0 AF laser perfotaed for fresh-cut

width of stock film:

- 405 – 480 mm
- 405 – 500 mm
- 405 – 500 mm
- 405 – 500 mm
- 405 – 500 mm
