

APACK Uniq portion pack MAP solution...

The new packaging technologies provide opportunities for environmentally friendly and cost effective production (minimize weight), together with efficient distribution and waste control. Apack focus on products and packages that are convenient for consumers without chemical preservatives.

We develop new packaging line with packaging material tray and lid film for fresh pasta which give 2 months shelf life and ready to service after heat. Along with this, less material is used. The introduction of fresh pasta portion MAP realizes a real perfection ensuring an eye catching display of the product on shelf, an unimpeded, clear view of the laocal taste and the facility for retailers to change band labels with their own logo and copany information.

MAP packaging and heat treatment at 85C provides an increase in line result by around 25%. We offered complete automatic MAP line incl. autoMAP200 tray sealer, multihead weigher, tray denester, vibration unit, ink-jet, metal dedector, check-weigher, collecting table and Auctoglave. Also offer copolimerPP tary and multilayer, Antifog lid film either a peelable or permanent seal on the basis of the application. MAP offers less packaging resulting in lower cost for industrial producer and retailers. So MAP are the right strategic, environmental, and technical choice. Retailers have 3 key intentions: Reduce the carbon footprint Use recycled material Reduce weight APACK is addressing these intentions

Our packaging design and functionality that respects tradition, but at the some time creates a wide range of new opportunities. Our solutions creates a new platform for a whole new range of innovative products, targeting the next generation of consumers
